ABOUT

She delivers User Experience Solutions.

From Strategy to Experience

Over the past eight years, I have built a cross-border design career across Japan and Korea, working at Sonorité Inc. in Tokyo and transcosmos Korea. In March 2025, I entered the International Design School for Advanced Studies (IDAS) at Hongik University to deepen my expertise in UX design and typography, leading academic research projects and authoring multiple publications. Expanding beyond my foundational background in web and content design, I have broadened my professional scope into design planning and marketing since August 2026.

Zero UI and Continuance Intention in Running Applications : A Self-Determination Theory Perspective

First Author, Corresponding Author | Design Works

This study explores the impact of Zero UI on user experience and continuance intention in running applications.

2026

Emotional Experience UX Strategies for Image-Based Social Learning Platforms: A Q-Methodological Approach Grounded in Emotional Design Theory

Solo Author | Archives of Deisgn Research (under review)

Driven by language learning demands and advancing AI technologies, this study explores emotional UX strategies for an imagebased social language learning platform prototype.

Enhancing Data Visualization & Information Legibility

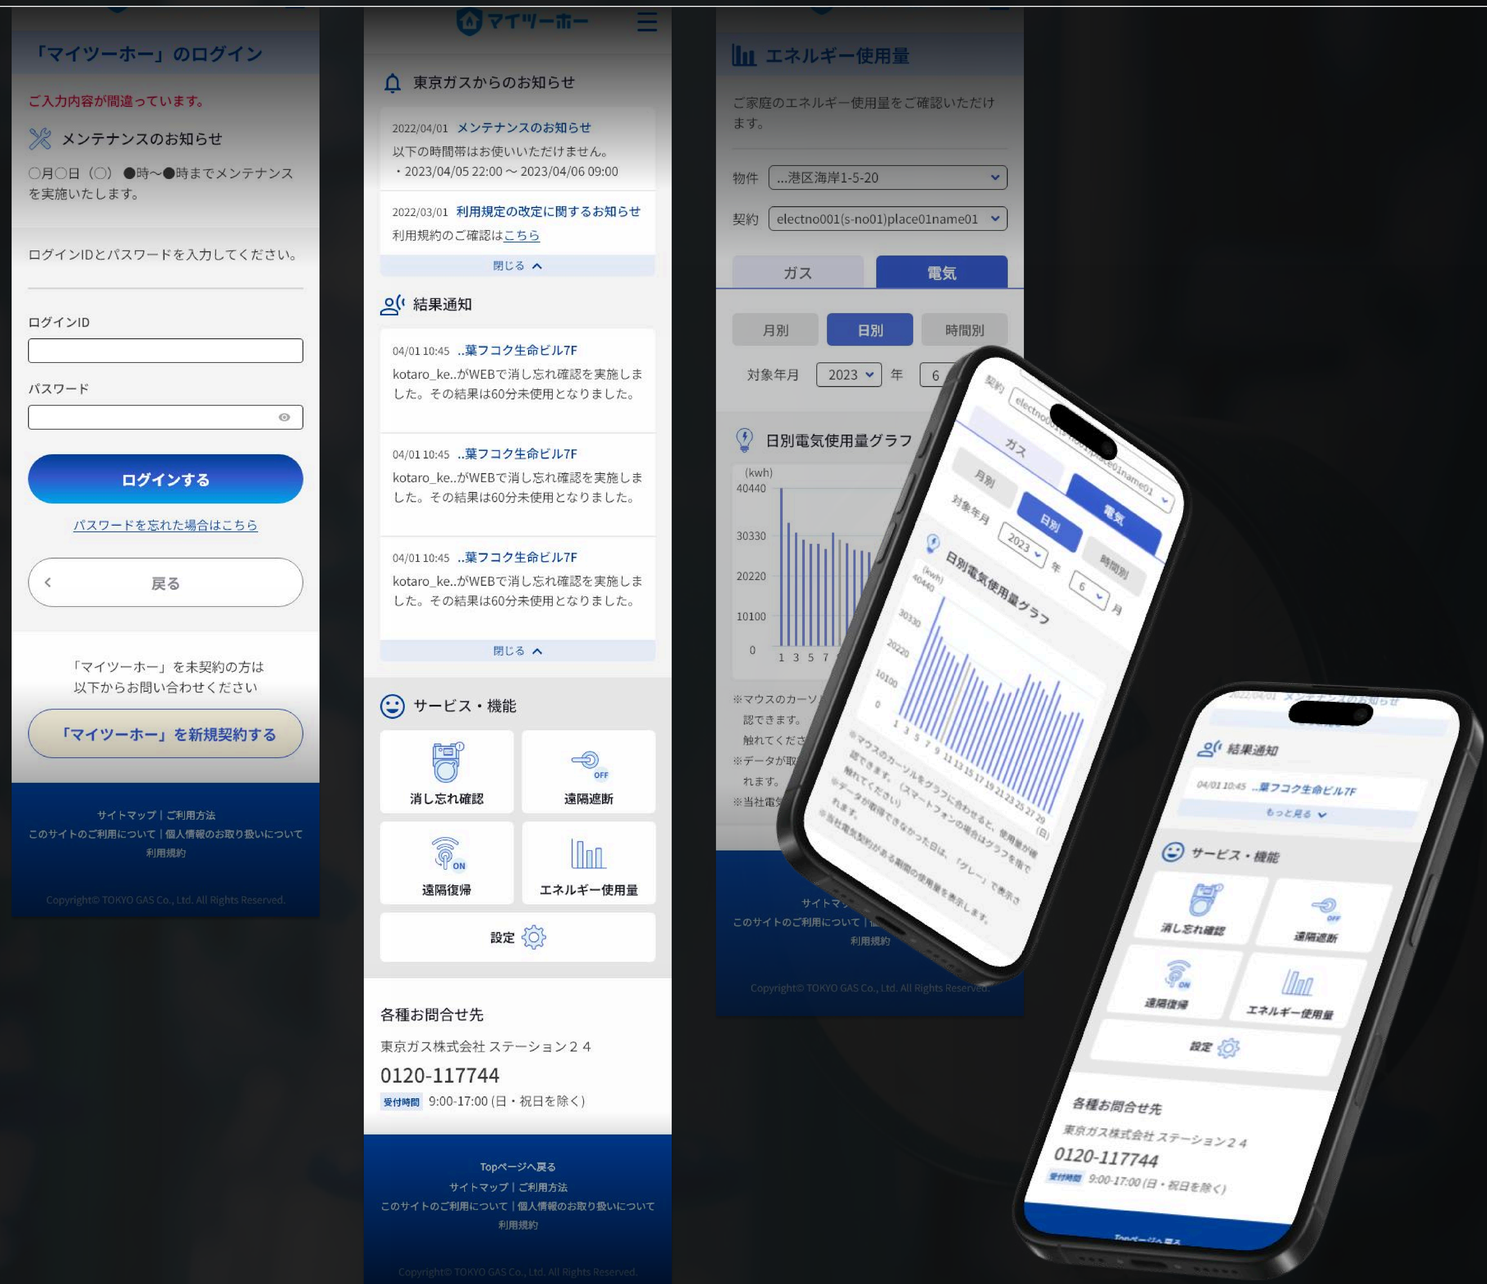
Tokyo Gas mobile web UI design enhanced with data visualization and information clarity

DataVisualization WebAccessibility MobileUI

Tokyo Gas Mobile Web UI Design

This project focused on redesigning the mobile web UI for Tokyo Gas, spanning from the login gateway to comprehensive gas and electricity consumption dashboards. To provide effortless utility tracking, I designed intuitive data visualizations allowing users to break down consumption patterns across yearly, monthly, and daily views. Addressing a broad user base across diverse age groups, I placed a strong emphasis on mobile web accessibility—presenting multiple component variations in button scale, color contrast, and iconography, while continuously aligning design solutions with client requirements.

Role Lead Designer | **Contribution** 80%



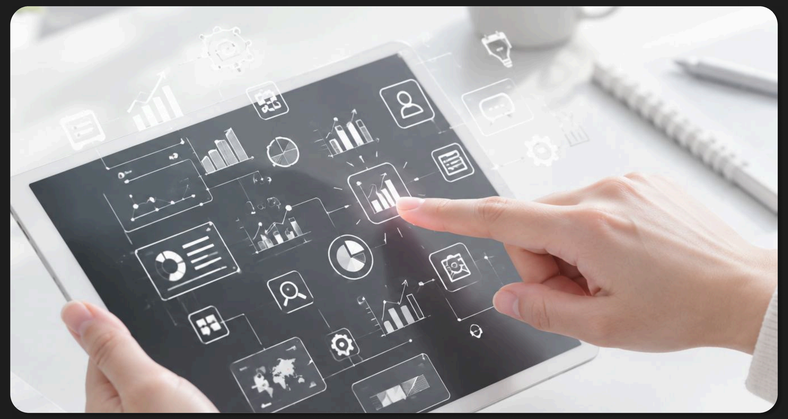
Mobile Web UI Design | Project Background & Key Challenges

Building a Mobile Energy Dashboard and Service UI for Users of All Ages

Energy Data Management Service

A project to design a **web app / mobile dashboard UI** where Tokyo Gas members can log in and check their gas and electricity usage by year, month, and day in real time.

Mobile Optimization



Complex text and numbers, such as gas and electricity usage, billing history, and notifications, called for **an intuitive layout that shows key information at a glance.**

Web Accessibility

Ensuring **easy touch interaction and high readability** for a wide range of age groups, including seniors.

Mobile Web UI Design | Problem Definition

Information Search Fatigue Caused by Complex Data Layouts and an Unclear Visual Hierarchy

High Effort to Explore Data

Usage information was listed mostly as raw numbers, making it **hard for older users to compare and understand their yearly, monthly, and daily usage patterns at a glance.**

Low Readability on Mobile Screens

On a limited mobile screen, the typographic hierarchy was unclear, **reducing scannability across key sections.**

No Accessibility Guidelines for a Broad Audience

The service needed clear standards for button size, touch area, and a consistent icon system that **consider users with low vision and those less familiar with mobile.**

Mobile Web UI Design | Goals & Strategy

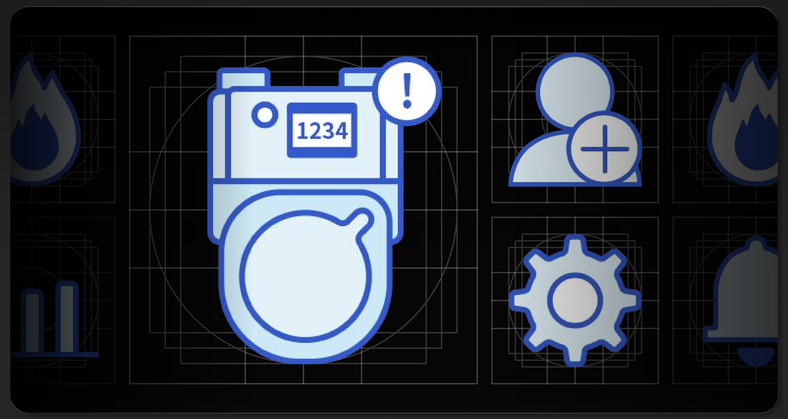
User-Centered UI Design with Intuitive Interactive Graphs and Index Icons

Through intuitive graph visualization and accessibility-compliant UI design,
I built a mobile dashboard where users of all ages can understand their energy information at a glance and use it with ease.

Usage Data Visualization

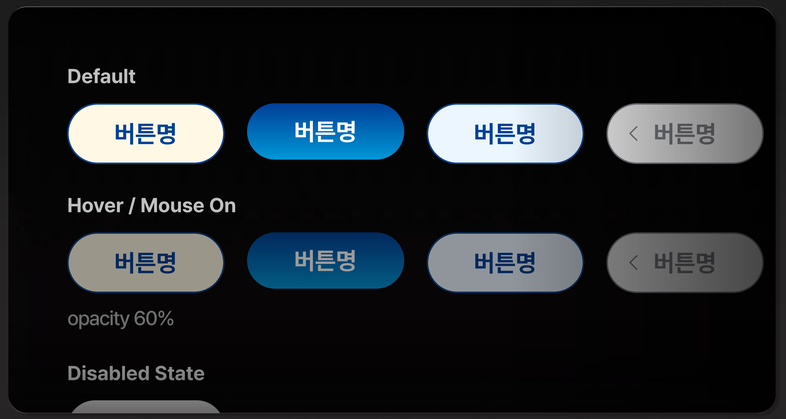
Turned gas and electricity usage data into **interactive mobile graphs by year, month, and day,** making it easy for users to compare and understand their usage.

Index Icon Design



Paired key headings (h2, h3) with **dedicated, intuitive index icons,** helping users find information much faster while scanning.

Accessibility & Multiple UI Options



Proposed multiple design options (A/B) for button color, size, touch area, and icon style, and **refined the final UI based on client feedback.**

Optimizing Information Architecture & Intuitive User Flow

UI/UX Redesign for NTT DOCOMO CSR Platform

ContentArchitecture　InformationArchitecture　WebDesign

The Bridge of Smiles "Rainbow Project"

This project involved the complete UX/UI redesign of the "Bridge of Smiles Rainbow Project," a sustained CSR initiative launched by the DOCOMO Group right after the Great East Japan Earthquake on March 11, 2011, to support Tohoku's regional recovery. The primary objective was to establish a stable, efficient CMS operation environment while streamlining information architecture and user navigation.

Role Planning · Lead Designer　|　**Contribution** 70%

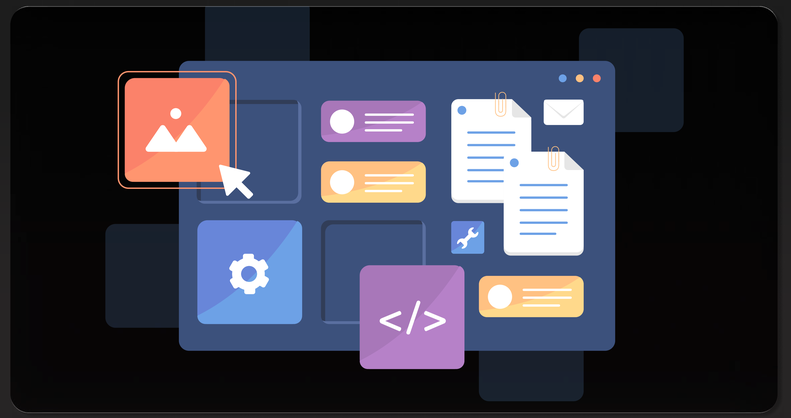
CSR Platform Renewal | Project Background

A Paradigm Shift: From Disaster Relief to a Sustainable Platform for Regional Revitalization and Partnership

A New Stage of Activity

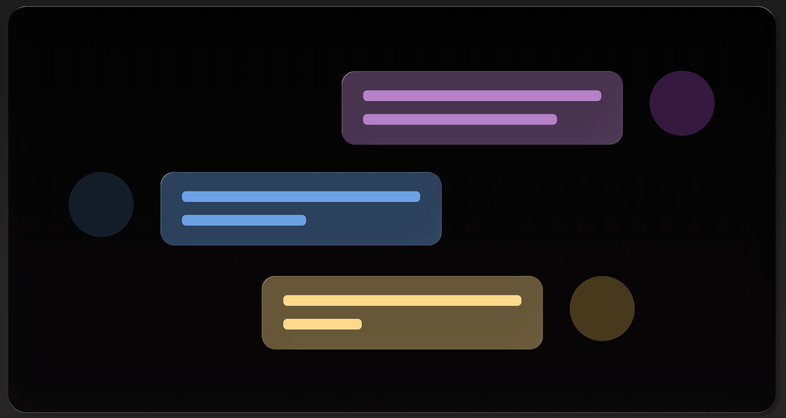
After seven years of continuous Tohoku recovery support, the initiative **shifted from basic relief to regional partnership and revitalization,** calling for a redesign of its media to match.

Improving Site Operations



Seven years of ad-hoc updates had left the site with **complex navigation and a heavily customized CMS.**

Direction of the Renewal

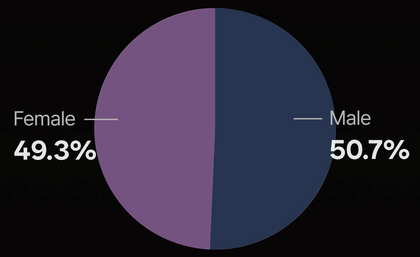


The goal was to shift from one-way announcements to **two-way communication,** from a general audience to tailored information for individual users and partner organizations.

CSR Platform Renewal Problem Definition

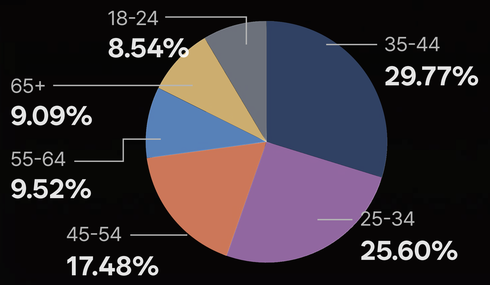
User Age, Devices, and Audience Are Shifting, but the Current Website Hasn't Kept Up

Gender



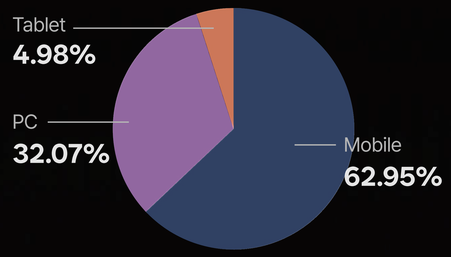
Slightly more male users than female, but no significant difference.

Age Distribution



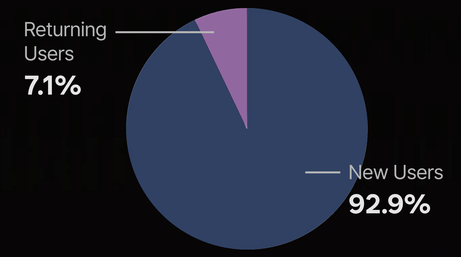
The audience is now **centered on users in their 20s to 40s.**

Devices



Smartphones account for more than half of traffic, but **PC use is still high.**

New vs. Returning Users



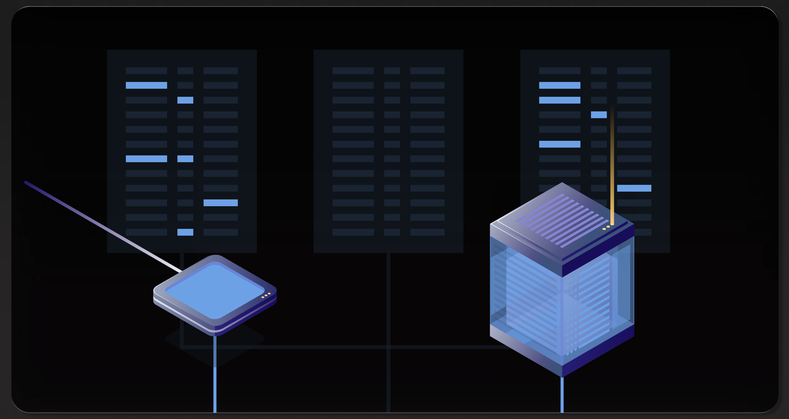
Most visitors are new, and **returning users are very few.**

- Fragmented Information Architecture & High Bounce Rate
- Buried Content Assets
- No Response to a Diversifying Audience

CSR Platform Renewal　Content & Design Strategy

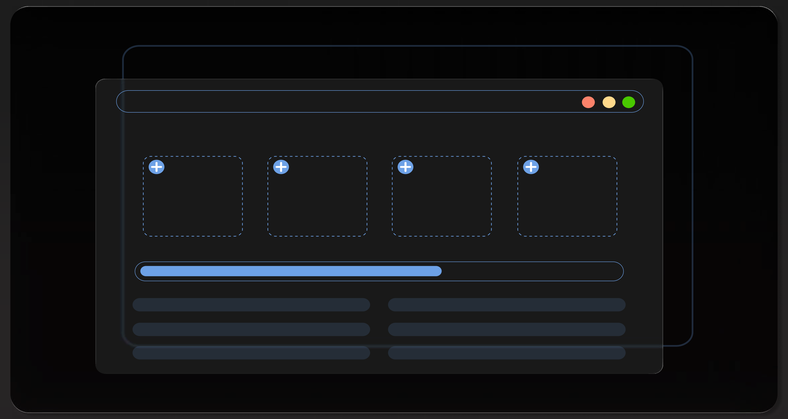
Three Improvement Principles Based on “Universal Design” to Help Every User Reach Their Goal Without Confusion

Search-Friendly Categories



Added interest-based tab menus and **reorganized the search listings** for past articles.

Screens for Purpose and Intent



Renamed the page to “Regional Activities & Revitalization” and **added a contact point (inquiries / consultations)** that connects users with local communities.

Universal Color System

Defined Rainbow colors for each function and category to **create a clear visual hierarchy and ensure accessibility.**

NIPPON EXPRESS | ＮＸ情報システム

Website Redesign Proposal

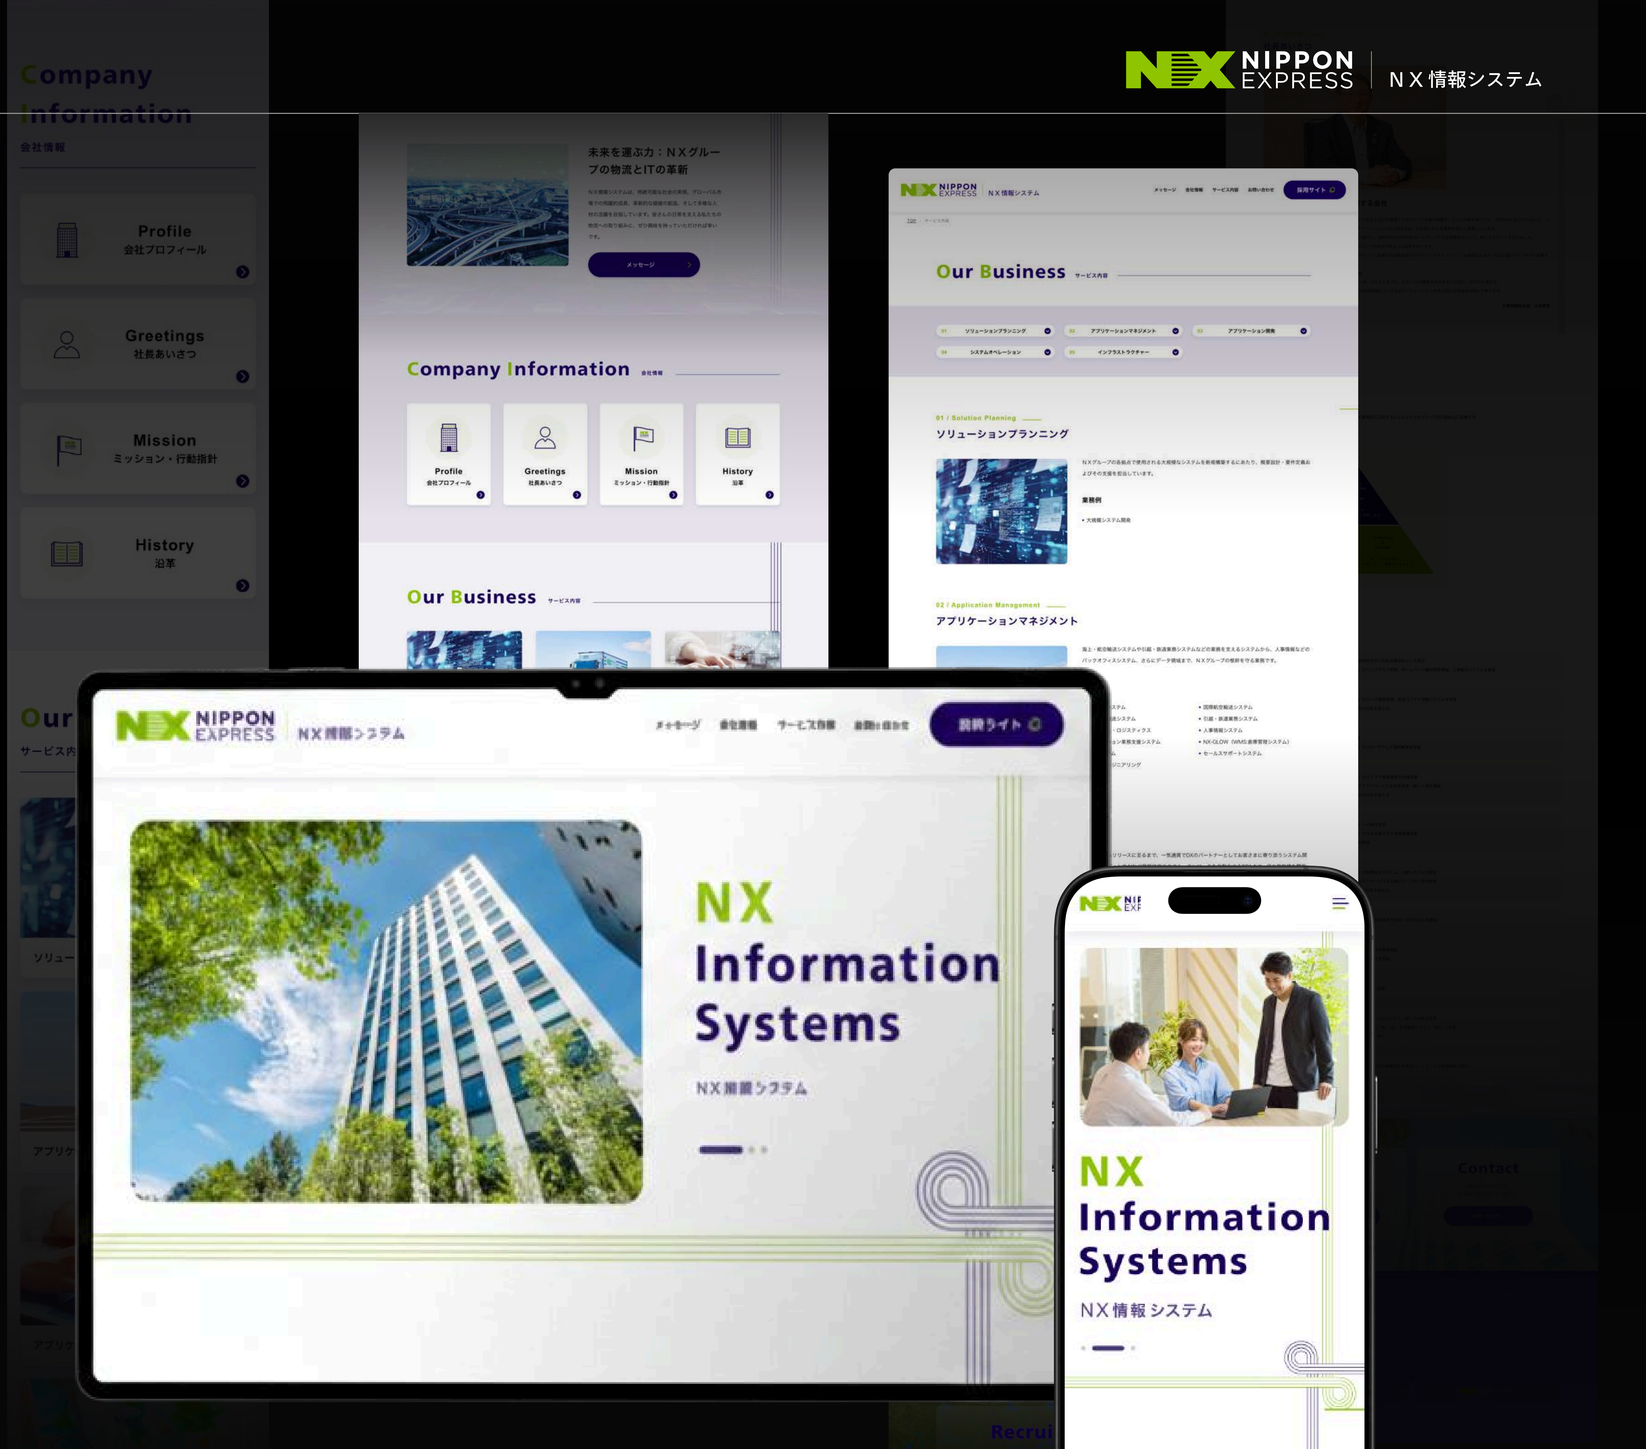
Strategic Design Renewal for NX Information Systems

ResponsiveWeb　DesignStrategy　WebDesign

NX INFORMATION SYSTEMS CORPORATE WEBSITE

Successfully won the project pitch through competitive bidding with a comprehensive redesign proposal. I led the responsive web design across the main and subpages, and established clear design guidelines to ensure a seamless, consistent user experience. The hero visual was crafted using pattern graphics derived from the corporate logo, effectively reinforcing the brand's identity.

Role Design Lead　|　**Contribution** 70%



Corporate Website Renewal | Goals & Direction

Corporate Website Renewal to Strengthen Credibility as an IT Infrastructure Company and Win New Business

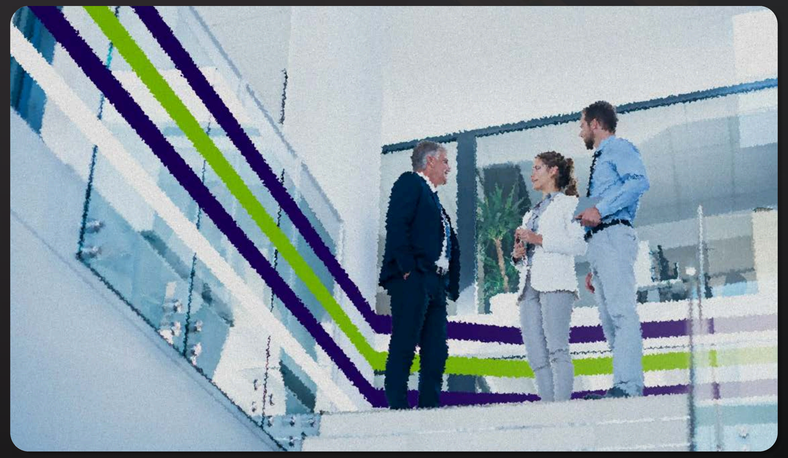
Building Brand Credibility

As a wholly owned IT subsidiary of Nippon Express (NX Group), the company **set out to rebuild its own corporate web channel.**

Defining the Project Scope

Separated the corporate site and the recruitment site into two distinct builds.

Winning a Competitive Bid



Won the competitive bid with **a design proposal and concept mockups** that precisely reflected the client's needs.

Corporate Website Renewal | Problem Definition | Goals & Strategy

From Scattered UI to One Brand Language

Disconnected from the Brand Identity

The visuals failed to reflect NX Group's expertise in IT and logistics infrastructure or the brand's signature sense of speed, **limiting its ability to communicate a distinctive vision.**

Poor Mobile Optimization and an Outdated Design

The site did not keep up with changing devices (mobile / tablet), **making information harder to access and read for mobile users.**

Inconsistent UI Elements

Icons, typographic hierarchy, and UI components were not standardized across subpages, making information harder to find.

Graphic Motif

Extended the distinctive lines of the NX Group logo into the main visual motif, **visually expressing the speed and scalability of IT logistics.**

Responsive Grid

Established a 12-column responsive grid that adapts smoothly from desktop to mobile, and applied touch-friendly mobile navigation.

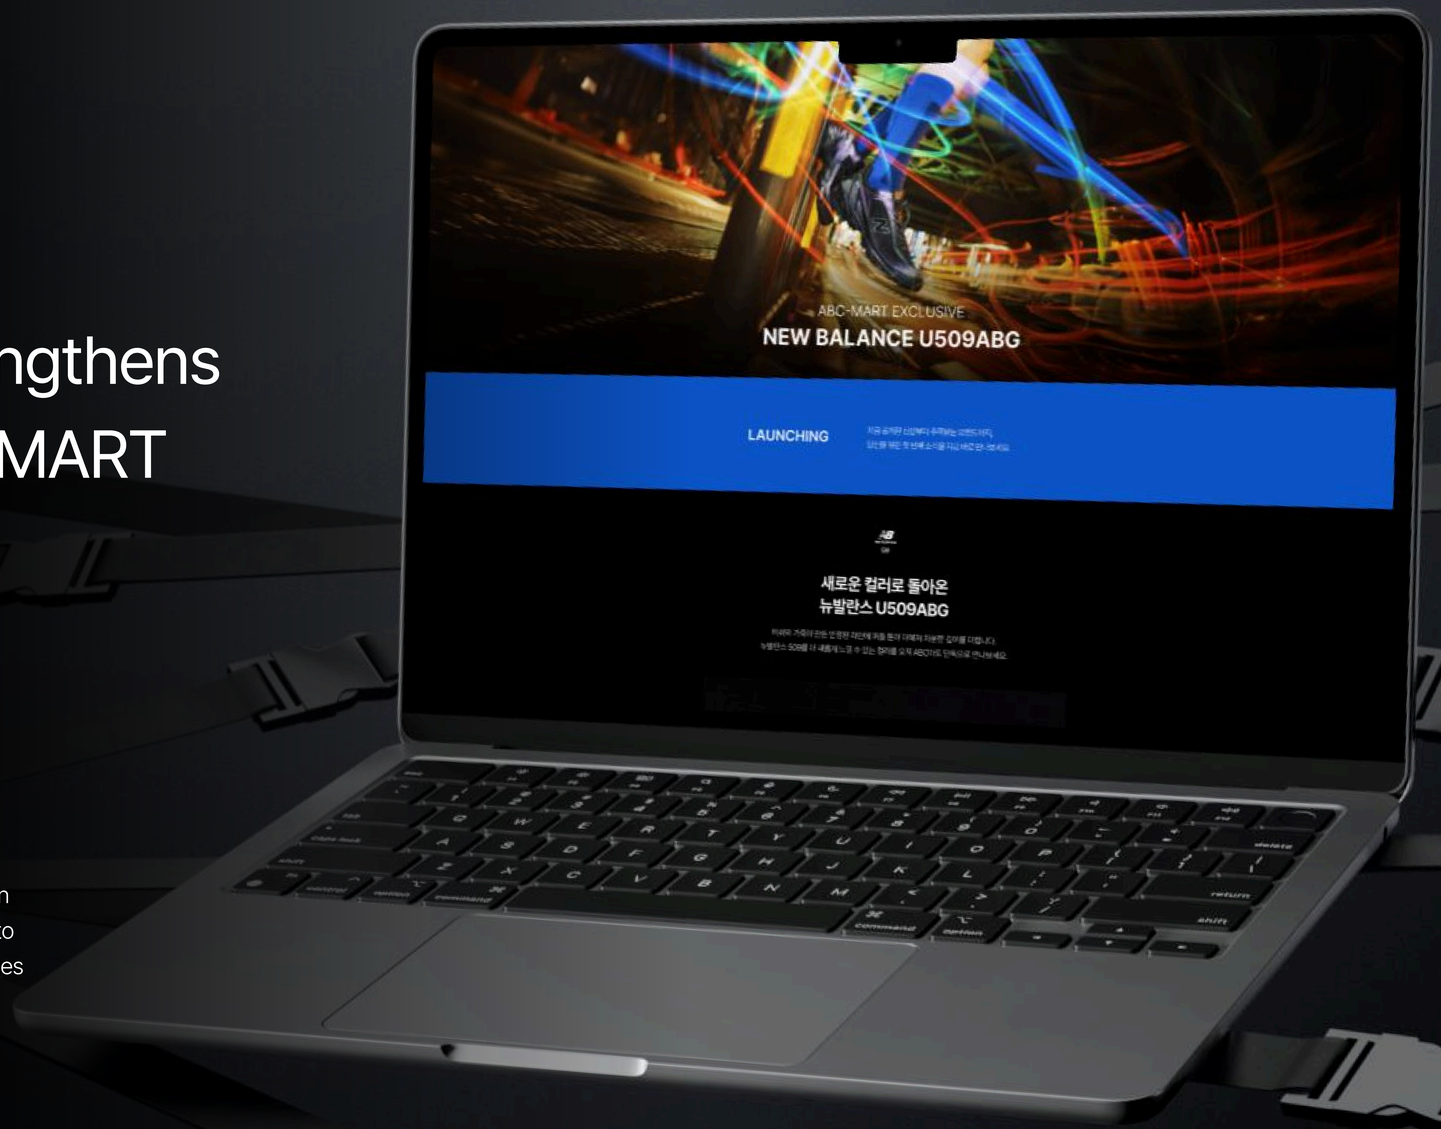
Design Guidelines

Built a main and accent color palette **based on the corporate BI colors (purple / lime green)** and applied custom pixel-crafted index icons.

ABC-MART

Promotion Design That Strengthens the Purchase Flow for ABC-MART

E-commerce Promotion Design for Seamless Purchase Flow



PromotionDesign

ABC-MART

Going beyond a simple product listing, I designed promotion pages around the customer's purchase journey. ABC-MART's dynamic brand identity was reflected in the visual elements, and the flow from event participation to purchase was built into an intuitive UI. By keeping a consistent brand tone across digital channels, the pages delivered a conversion-focused shopping experience.

Role Project Management · Design Support | **Contribution** 50%

Promotion UX/UI Design | Project Background

A Seamless Shopping Experience Amid Vast Product Information, from Noticing Offers to Making a Purchase

Too Many Products and Offers on One Screen

During major seasonal sales and brand promotions, large amounts of product information and coupon offers were crowded onto a single screen, **making browsing tiring for users.**

The Need to Improve Conversion Rate

The goal was not just to attract views, but to **optimize each stage of the purchase funnel,** from **noticing offers → browsing products → adding to cart and checkout.**

Direction of the Improvement

Wove the brand identity into the graphic elements and **designed an intuitive UI around three steps (see offers → browse curated picks → buy instantly)** to boost conversion.

Etland Social Content Built on Seasonal Brand Experience Design

Etland SNS content Built on Seasonal Brand Experience Design

Branding ContentDesign Advertisement

Etland Instagram Channel Management

I analyzed seasonal and promotional calendars alongside trends to identify each month's communication themes, then planned content across three categories: events, product introductions, and informational posts. I wrote the feed copy and design briefs myself, aligned concepts, products, and copy with the client, and directed card news production based on the approved plans. After publishing, I also handled comment responses, event operations, and winner announcements, leading the entire channel from planning to operations. By keeping a consistent brand tone even as consumer context shifted each season, I designed promotions to become part of a "seasonal experience" rather than one-off sales pushes.

Promotional Motion Graphics That Drive App Adoption

Motion Graphics for Resona Bank App Promotion

MotionGraphic　AfterEffects

Resona Bank · Saitama Resona Bank App Introduction Page

This project involved creating motion graphics for an app introduction page by Resona Bank and Saitama Resona Bank, both part of Resona Holdings, to encourage use of the Resona Group app. By bringing the page's illustrations to life with motion, I helped communicate the app's features and convenience more intuitively than static visuals could. Over about one month, I produced four motion pieces in After Effects, covering desktop and mobile versions of both the main page and a subpage. I adjusted the scale and timing of each movement to suit the aspect ratio and eye flow of each screen, and used the brand colors of green and yellow to convey both the bank's trustworthiness and the app's friendly feel.
